

TRACTOR GRIP™

HAND TOUGHENER

Many physical activities create shear forces in the skin that can result in blisters or localized calluses. Localized calluses may build up until they tear off leaving you sore and sensitive. The Tractor Grip™ hand toughener toughens the skin uniformly over a larger area without causing blisters. The toughened skin forms a solid base for calluses that form during specialized activities so that they do not tear off so easily.

The Tractor Grip™ hand toughener works by creating sharp pressure points in the skin that stimulate the production of keratin, the substance that gives you tough skin. This is exactly the same toughening effect that occurs on the tips of the fingers of a guitar players fret fingering hand. The Tractor Grip™ hand toughener is specially designed to produce a maximum skin toughening effect. This all happens without causing blisters because no planar shear forces are involved.

For effective results squeeze the toughener or press it into the desired area to be toughened for several minutes each day. Faster results can be obtained by doing this more often. Significant results can easily be obtained with a week or even less.

Use the Tractor Grip™ hand toughener to increase your enjoyment of many physical activities including water-skiing, rock climbing, gymnastics, or even some forms of hard work!

Keep one at your desk at work, and one by the remote control for your entertainment center and make those sedentary minutes count!
